

CYBERLOQ (OTC: CLOQ) INVESTOR FACT SHEET

AT A GLANCE

CyberloQ keeps user's sensitive Personal Identifiable Information (PII) in "non-active" status, only accessible through a secure authentication process. Utilizing elements of a user's PIN – in combination with the unique MEID or UDID of the mobile device – CyberloQ creates a robust perimeter that prevents would-be hackers from activating user's accounts. Leveraging Google's geolocation service, CyberloQ creates a virtual boundary – otherwise known as a Geofence – around each user and their confidential information. CyberloQ's Geofencing functionality is compatible with the latest wireless technology, including cellular networks, Bluetooth, and WiFi. Whether it's a designated perimeter over a city, building, if a user's designated Geofenced cyber perimeter is breached, the account is immediately disabled. To breach a CyberloQ Geofence, hackers would need all the user's PIN data, be in possession of the user's personal mobile device, and be physically within the designated Geofence. CyberloQ Geofencing provides a flexible and easy to use proactive cyber security measure. It creates a scalable hardened target and keeps cyber criminals on the outside – where they belong.

CLOQ MARKET CONSIDERATIONS

1. Cybersecurity is a market that needs no introduction. With millions in the US and abroad already personally dealing with fraud of some kind in their life, the protection of personal data is on all of consumers' minds most of the time.
2. With a unique technology in hand, CyberloQ Technologies, Inc., can cover anything and everything that's connected to the internet, a web-based portal, debit cards, and credit cards. To date, none of their competitors has the whole suite of products that CyberloQ possesses.
3. CyberloQ is proactive and preventative fraud protection. To breach a CyberloQ geofence, hackers would need all the user's PIN data, be in possession of the user's personal mobile device, and be physically within the designated geofence. CyberloQ would automatically shut down all suspicious activity, especially when dealing with cross border payments.
4. Valued at \$120 billion in 2017, Cybersecurity-related spending is on track to surpass \$133 billion in 2022, the global cybersecurity market is estimated to exceed \$300 billion by 2024, and the market has grown more than 30x in 13 years.

CLOQ INVESTMENT CONSIDERATIONS

1. Unlike so many micro-cap stocks, CLOQ has an enviable capital structure with less than \$35K in total debt. No convertible notes and no rogue financings of any kind with shady lenders. CLOQ has been funded to date by board members and angel investors who know this space and know the potential of CLOQ.
2. This is a fully reporting company. Not a shell, so no shell concerns or reverse merger overhang.
3. Only 17MM shares currently in the public float and the CLOQ knows the majority of its shareholders, who has restricted stock, who has stock deposited, etc. That makes this is a tightly held equity.
4. The Company owns its own technology and it is patent pending. NO licensing fee expense!
5. Having never been a part of 3rd party promotion or promotion of its own doing, CLOQ president, Chris Jackson believes, "We are an unknown commodity, a true diamond in the rough.
6. "We're seeing mega-breaches happening on an extremely frequent basis," Chris Ahern, a data scientist and principal at Strategic Cyber Ventures, told Reuters. "I don't think that's going to stop anytime soon. And investors are seeing that as an opportunity for investment."
